Antonio Johnson, Marguax F

The Title of the article I chose was Colors of the court https://pudding.cool/2024/10/nba-uniforms/. This article was mainly about the appearance of the NBA jerseys for each team and how often the uniforms are being used in comparison to one another. There is sufficient context for visualization because you can click on a specific jersey and there will be in formation provided about it. Another strategy would be that the jerseys would have different labels. For example, they would be labeled "Association", "Icon", "Statement", or "City" depending on the colors being used. One visualization I would make a slight change on would be that you can expand the time range of the variety of jerseys from 10 years to 20 years and it would be even more interesting.

https://viz.wtf/

This visualization isn't very good because it's inaccurate. The percentages doesn't align with the visualization since 18% appears smaller than the 8%.
